

IN THE CLAIMS

Please enter the following amendments to the claims:

11. (Currently Amended) A device useful for dispensing a liquid comprising:
a plurality of needles, the needles each including a sharpened end ~~and being bent adjacent to the sharpened end~~;
a base including bores in which the needles are at least partially inserted, the base including an annular space to which the bores extend;
a cap sealing mounted to the base and forming a plenum space with the base, the plenum space including a portion of the base annular space, the cap including a fluid passageway in fluid communication with the plenum space.
12. (Original) A device in accordance with Claim 11, further comprising:
an annular member having a center hole, the base positioned in the center hole.
13. (Currently Amended) A device in accordance with Claim 12, further comprising:
a ring positioned against the needles ~~needle bends~~, the needles positioned between the ring and the annular member, the needle sharpened ends extending past the ring.
14. (Original) A device in accordance with Claim 13, wherein the needle sharpened ends extend past the ring a distance between about 0.5 mm and about 3.0 mm.
15. (Currently Amended) A device in accordance with Claim 11, wherein the needle sharpened ends are bent ~~between~~ at an angle between about 1 degree and about 25 degrees.
16. (New) A device in accordance with Claim 11, wherein the needles are dimensioned to penetrate skin to a depth that goes beyond the superficial vascular plexus, but not as deep as the deep vascular plexus.
